ABSTRACT OF THE DISCLOSURE

A system and method is provided for securing content stored on media. One method includes attaching content privileges to the media, wherein the privileges govern a plurality of levels of access, and configuring the media to permit access to the content according to the content privileges and predetermined conditions. An apparatus for securing content stored on media includes at least one tool for transferring content onto the media, the tool configured to attach a plurality of levels of access, wherein content privileges and predetermined conditions govern access to the content.
